

Nick breeze is a really good model,can we build on things of that nature. A critical essay of distributed databases built on...

Keep the central idea of critical essays and how to frame these in a societal context

Start to think of narratives of how that technology can be used

Maybe to build a store to go and pick items for free, every time the blades ran, it would make a micro payment that would transfer over to the bitcoin

In terms of how to construct...a real world implication of that technology

What the contemporary discourse is..

The modernization within this space, the use of technology and how techno. Functions

Modernization vs. modernity

BIG question: whats the critical discourse involved in that technology

“As revolutionary as it sounds, Blockchain truly is a mechanism to bring everyone to the highest degree of accountability. No more missed transactions, human or machine errors, or even an exchange that was not done with the consent of the parties involved. Above anything else, the most critical area where Blockchain helps is to guarantee the validity of a transaction by recording it not only on a main register but a connected distributed system of registers, all of which are connected through a secure validation mechanism.”

– [Ian Khan, TEDx Speaker](#) | Author | Technology Futurist
